

Application

The CA9-TE series are yarn cutters devoted to textile machines. They can cut up to 7 000 dtex yarns.

FUNCTIONS: When operating on yarn machines, the breaking of one (or more) yarn has to be detected immediately and automatically. Yarn sensors play this part. To **avoid a "wild" rewinding** which could be cause of perturbations on neighbouring sites, even of breaking of the machine, it is recommended to mount **CA9-TE** onto the machines. First they cut off the broken yarns, **second they grip them**.

On winding machines, the yarn has to be **cut when the bobbin is full**. **CA9-TE** series have to be manually reloaded.

PRINCIPLE: The yarn passes through the groove of the yarn cutter and is led by two guides. When occurring, a hammer (knife) striking against an anvil cuts the yarn. The electromagnet, activated by the yarn sensor, attracts the framework and releases the blade. Striking strength is supplied by a compressed spring triggered by the electromagnet. A pincer holds the yarn.

ELECTRICAL PROTECTION: The CA9-TE series are protected against reversed polarities and is dust resistant

Characteristics :

- Power supply : 18 to 30 V
- Cutting capacity up to 7 000 dtex
- Visual alarm (red LED)
- Can be delivered fixed on following aluminium rails
- Push button for manual cutting

These characteristics are adapted to operator's requirements (Referenced to the codification board)
